max consecutive ones

maintain count & maxCount variable.

Iterate over the length of the array.

if (nums[i] == 1)
    Increase the count &
    calculate maxCount

else
    count = 0 (∵ restart from zero)

return maxCount

TC ⇒ O(N)

single Number

created map

Iterated over the length of array & pushed the elements onto map.

applied for each loop & find out whose second value is 1 & return its key.
